Job Vacancy

23/7/2025

Mbeya Agrochemicals Co. Limited deals with importing and distribution of high-quality agricultural inputs in Tanzania. We are specialized in supplying a wide range of agrochemical products, including (insecticides, fungicides, herbicides, and other related farming inputs. In addition to product distribution, we are committed to empowering farmers by **providing valuable knowledge and best farming practices** to enhance agricultural productivity and sustainability.

The company headquarter is in **Arusha**, but our operations extend across Tanzania ensuring that farmers have access to our agricultural solutions.

Our Mission

To provide the highest quality agricultural inputs through a cost effective and innovative ways to meet farmers requirements.

Our Vision

To become the preferred supplier of Agricultural inputs (Insecticide, Herbicide, Fungicide and other related products) in Tanzania

Job listing

Here are the current job opening at Mbeya Agrochemicals Co. LTD

Position: Local Agronomist

Reporting Line: Chief Agronomist

Operation Locations: Mbinga and Songea, Njombe, Sumbawanga, Mbozi, Iringa (**5 positions**)

Timeline: 6 months **October 2025 to March 2026.**

Key Duties:

- **Training and Capacity Building:** To train farmers, extension officers, and other agricultural stakeholders on best practices, new technologies, and sustainable approaches to farming.
- **Technology Transfer and Extension Services:** To act as a link between agricultural research institutions and farmers. They translate scientific findings into practical, actionable advice, conduct field trials and demonstrations, and organize training sessions, workshops, and farmer field days to disseminate knowledge on modern farming practices and technologies together with promoting MAC products and services.
- **Crop Production and Management:** To provide expert advice on optimizing crop yields. This includes guidance on suitable crop varieties for the local climate and soil, planting techniques, spacing, and overall crop care from planting to harvest

- **Pest and Disease Management:** Helping farmers identify and assess pest infestations and disease outbreaks. They develop and recommend integrated pest management (IPM) strategies, which might include biological controls, cultural practices, and judicious use of **MAC pesticides**, aiming to minimize environmental impact.
- **Problem Solving:** When farmers encounter issues like poor crop growth, unexplained plant deaths, or low yields, the agronomist is often the "crop doctor" who investigates the problem, identifies the cause (e.g., nutrient deficiency, pest, disease, environmental stress), and recommends solutions.
- Guiding all the agrodealers on the proper use of MAC products and insist them to purchase products.
- **Identify big scale producers BIG FARMERS** and convincing them to use MAC products
- **Excavating new productive areas** and ensure the penetration of products and services to the final users FARMERS

Requirements:

- Certificate or diploma in Agriculture (from a recognized institution)
- Working in agrochemical industry is an added advantage
- Good communication, writing and reporting skills.
- Indigenous of the areas mentioned will be an added advantage
